5 reasons to choose HPE Edge-to-Cloud Transformation Program

How to take an action plan and turn it into Day 2 operations

HPE GreenLake

The HPE Edge-to-Cloud Transformation Program guides you through the complexities of enterprise transformation. It's built on an established framework, the HPE Edge-to-Cloud Adoption Framework, an industry-recognized tool that provides the foundation for transformation efforts and accelerates the adoption of a modern cloud operating model.

There are many reasons to choose the HPE Edge-to-Cloud Transformation Program. We have selected the five most important ones to help you make the right choice:

1 Use a proven framework as the foundation

Not all companies providing transformation services base their efforts on a proven and recognized framework. At HPE, we use the proprietary HPE Edge-to-Cloud Adoption Framework for a repeatable and predictable approach to transformation success enabling your organization to adapt our prescriptive approach that works with your unique ambitions, constraints, and risk appetite.

This framework helps you understand and plan your transformation with a holistic view of the IT and business landscape. Our adoption framework has eight domains. Contained in each domain are capabilities and features an organization will need as it adapts and transforms to a hybrid operating model.

2 Benchmark your maturity with the Transformation Maturity Assessment

The Transformation Maturity Assessment helps you align the transformation priorities, identify where investments are needed, and enable measurement and management to support visibility and insights. And finally, it helps determine your readiness to plan, implement, and sustain transformation realization. The assessment utilizes the 8-domain operating model framework to benchmark a client's technical and organizational maturity to operate effectively in a hybrid cloud environment. This model is the foundation for developing an actionable edge-to-cloud adoption or transformation strategy tailored to your specific business needs.

HPE will help you identify the current landscape, find pain points, and create a backlog and high-level road map to help your business achieve the identified goals and outcomes.

Stop guessing and focus on what really matters to achieve the maturity you need for your transformation efforts.

3 Determine the right IT operational mix to deliver your strategic and business objectives

You need to make many choices along the way, and Hewlett Packard Enterprise can help you make the right choices and implement those decisions to best fit your business and objectives. We provide the expertise to discover and assess current environments, determine the best placement for workloads and data, build automated hybrid clouds, modernize and migrate applications, and develop cloud-native solutions.

HPE can modernize on-prem IT, fully automate your hybrid cloud estate, and introduce cloud-native architectures and frameworks to speed innovation. Key to a successful cloud-everywhere transformation, we can work with you to define your cloud strategy, create an effective cloud operating model, and establish governance and oversight for your transformation program.

HPE manages and controls your entire hybrid estate with the HPE GreenLake edge-to-cloud platform across domains, regardless of location or which cloud you choose.

4 Set up a separate business office to address transformation governance

Governance is essential to run a corporate strategy. It's the same with the IT operating model. Establishing a Transformation Business Office (TBO) ensures the technology implementation strategy is sustainable and will realize the expected outcomes. This is necessary as only a few have managed to sustain their transformation, so we want our clients to get it right. The Transformation Business Office helps sustain transformations over time to ensure success. You get a cross-functional governance body that defines strategy and drives implementation. We have been helping our clients develop and operate successful TBOs for many years with various mandates and tasks.

5 Begin your transformation with expert guidance and a proven plan

We typically find that the scope of effort required to transform is often broader than client organizations can support on their own, compounded by an urgency to accelerate the pace of transformation. Transformation Realization is how HPE Services proactively and collaboratively supports clients' ability to meet their digital or business goals. This approach leverages the client-specific insights from the Transformation Maturity Assessment, and their current state analysis aligns HPE's broader solution portfolio with the client's needs.

We offer a fit-for-purpose set of edge-to-cloud operating model, platforms and technologies, modernization and migration, or managed service solutions. They align with the client's current capability gaps, budget, risk appetite, and desired speed of transformation, allowing HPE and clients to co-deliver value.

With HPE, you can rely on years of experience and a structured program where experts guide you throughout your journey to accelerate your digital transformation for your organization's specific goals, KPIs, and desired business outcomes.

This collaboration gives you a proven plan that will get you where you want to go and prepare you for the future with the platform, technology, models, and services you need to move forward.

You can trust HPE to develop the architecture, provide the technology solutions you need, and even facilitate the management to support these operations.

There are many choices you need to make along the way, and HPE can help you make the right choices and implement those decisions in a way that best fits your business and objectives.
