

HPE Edge-to-Cloud Transformation Program

A program with three core transformation offerings to evolve your business

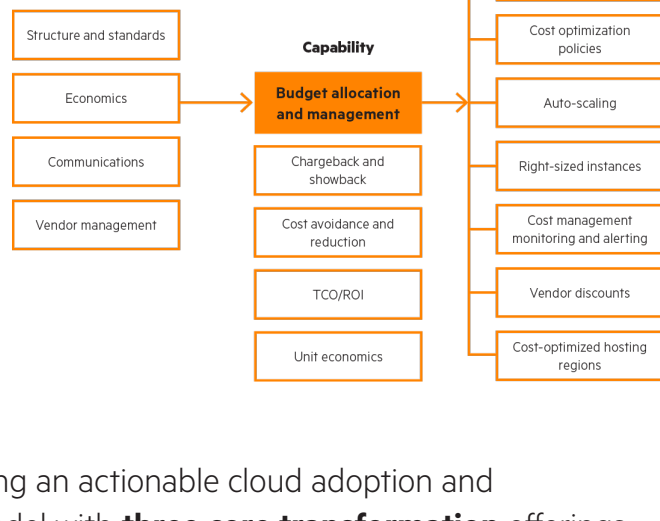

HPE Edge-to-Cloud Adoption Framework

Transformation must be holistic across several critical domains to operate successfully in today's hybrid environment. Hewlett Packard Enterprise has developed the HPE Edge-to-Cloud Adoption Framework to guide you through your transformation journey.

This framework helps you understand and plan your transformation with a holistic view of the IT and business landscape.

The adoption framework contains 8 domains. Each domain has the subdomains, and within the subdomains are capabilities and features an organization will need as it adapts and transforms to a hybrid operating model. Here is an example using the "Strategy and governance" domain to illustrate the subdomains, features, and capabilities.

This framework provides the foundation for developing an actionable cloud adoption and transformation strategy, road map, and operating model with **three core transformation offerings** that make up the **HPE Edge-to-Cloud Transformation Program**.

Three core transformation offerings

1 Transformation Maturity Assessment

Transformation Maturity Assessment utilizes the 8-domain framework to benchmark technical and organizational maturity to operate effectively in a hybrid cloud environment.

Rating maturity for each domain on a scale of 1 (lowest) to 5 (highest).

	1 Improvised	2 Adapting	3 Enterprise scale	4 Optimized	5 Maximized value
Strategy and Governance	Basic edge-to-cloud strategy	Federated initiatives, business case defined	Edge-to-cloud strategy defined	Strategy tied to business objectives	Full edge-to-cloud alignment
Security	Manual SecOps	Limited integration of edge-to-cloud management	Comprehensive estate management, functional automation	Optimized SecOps, Security as Code	SOAR, threat hunting
People	Task oriented	Collaboration / skill development	Culture of change, cross-organizational teamwork	Transformational leadership	Continuously improving, dynamic organization
Applications	No landing zones for teams	Landing zones defined, Dev/Test	Production workloads edge-to-cloud	Right mix automation, auto-healing, scalable	Fully scalable, HA cloud-native apps
Data	Limited centralized data standards	Initial data transparency and governance	Functional data strategy	Data architectures and consumption	Comprehensive data value realization
Innovation	Focused on Run / Operate	Fast followers	Fostering innovation	Customer input built into new technologies	Competitive advantage and industry disruptive
DevOps	Traditional SDLC	CI/CD initiatives, process clarity, heterogeneous tools	Cross-functional agile teams, culture change	Integrated toolchain, optimized throughput	Zero touch, continuous deployment
Operations	Classic ITIL in place, limited edge-to-cloud model	Defining edge-to-cloud service foundation	Scalable operations, site reliability defined	Full automation reporting—SRE implementation	Continuous improvement and self-healing

Requires significant effort
 Partially complete
 Substantially complete

It defines the backlog and road map to evolve the operating model, support digital imperatives, and sustain business value.

Once an organization knows where they are today, they need something to drive implementation, transformation, governance, decision-making, and more. That's where the **Transformation Business Office (TBO)** comes into play.

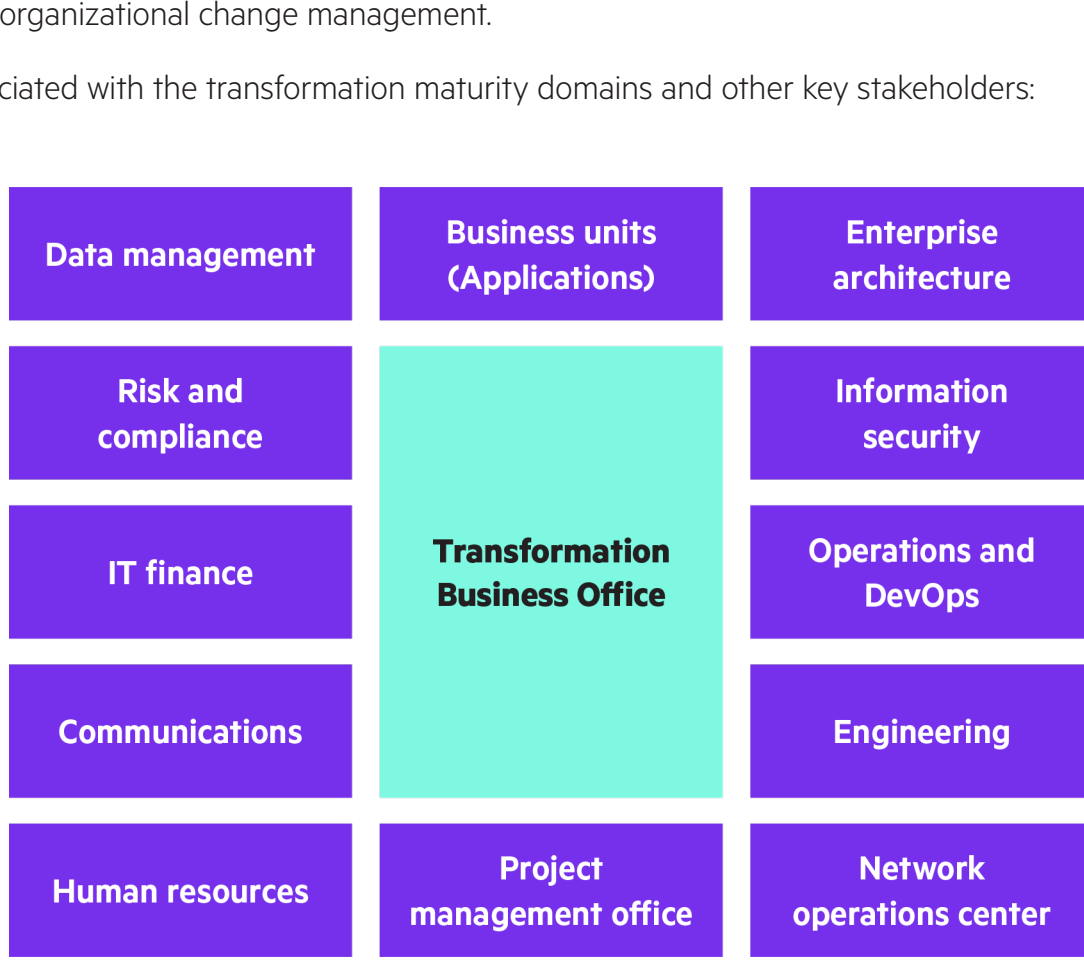

2 Transformation Business Office

Build a cross-functional governance body that defines strategy and drives implementation. It serves as:

Think about your TBO Transformation Business Office manager as the cloud product owner, who leads your organizational change management.

Areas associated with the transformation maturity domains and other key stakeholders:

The Transformation Business Office takes outputs from the Transformation Maturity Assessment and adds value by generating and driving the strategy and implementation of the transformation program/portfolio.

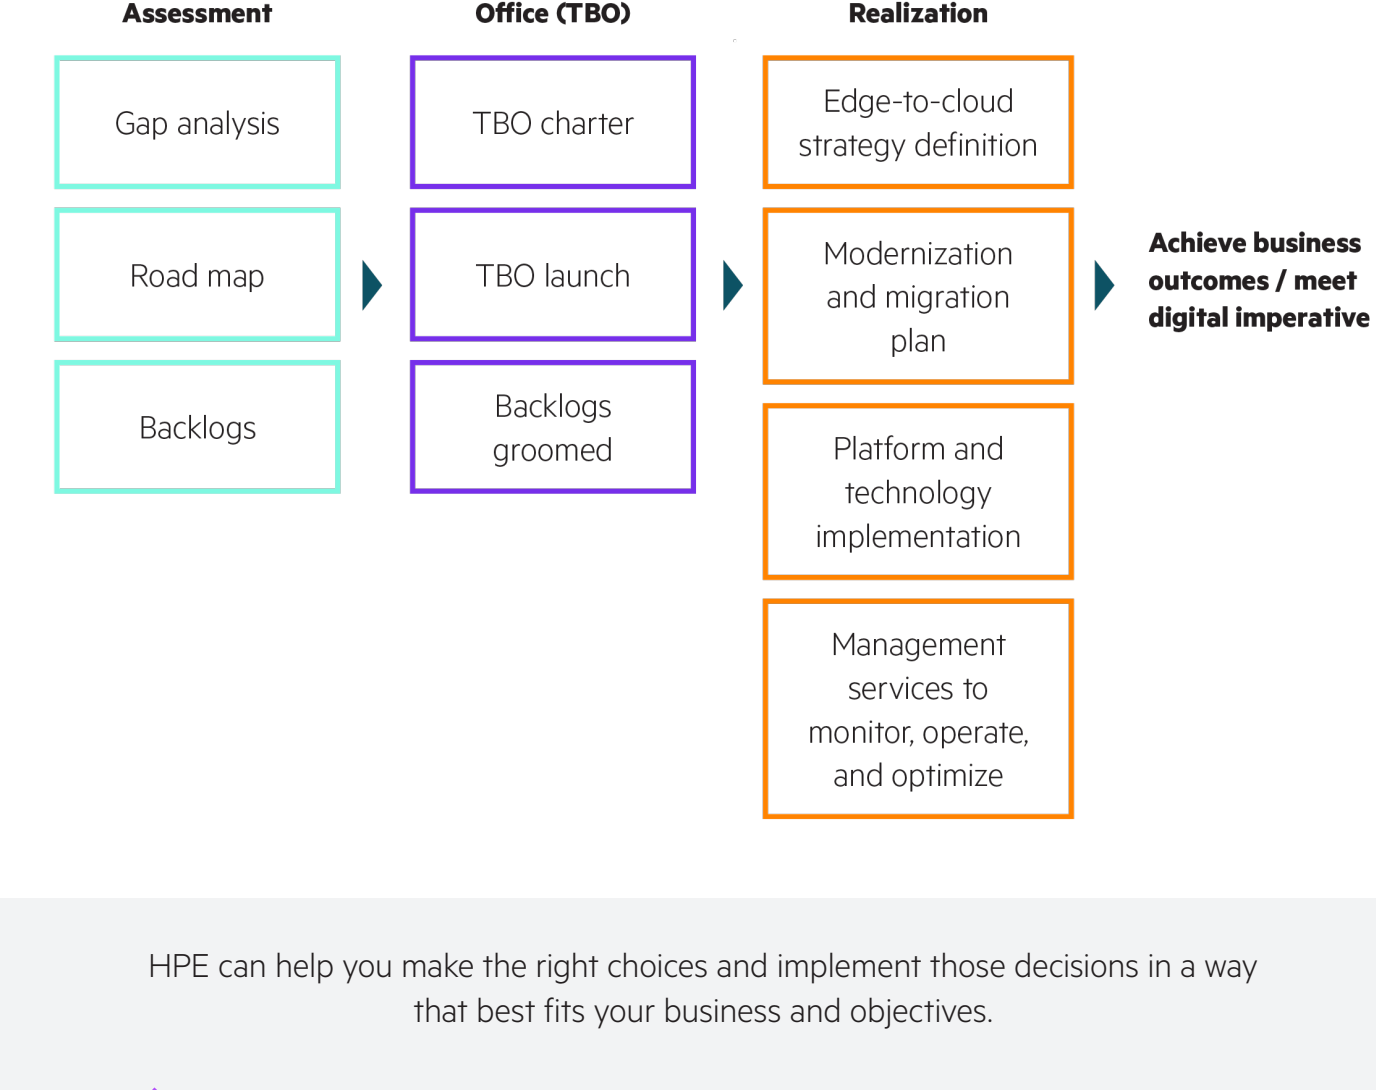

The Transformation Business office pairs with the 3rd transformation offering, Transformation Realization. Here, we partner with you to continue evolving your strategy and sustaining your journey regardless of where the journey may go.

3 Transformation Realization

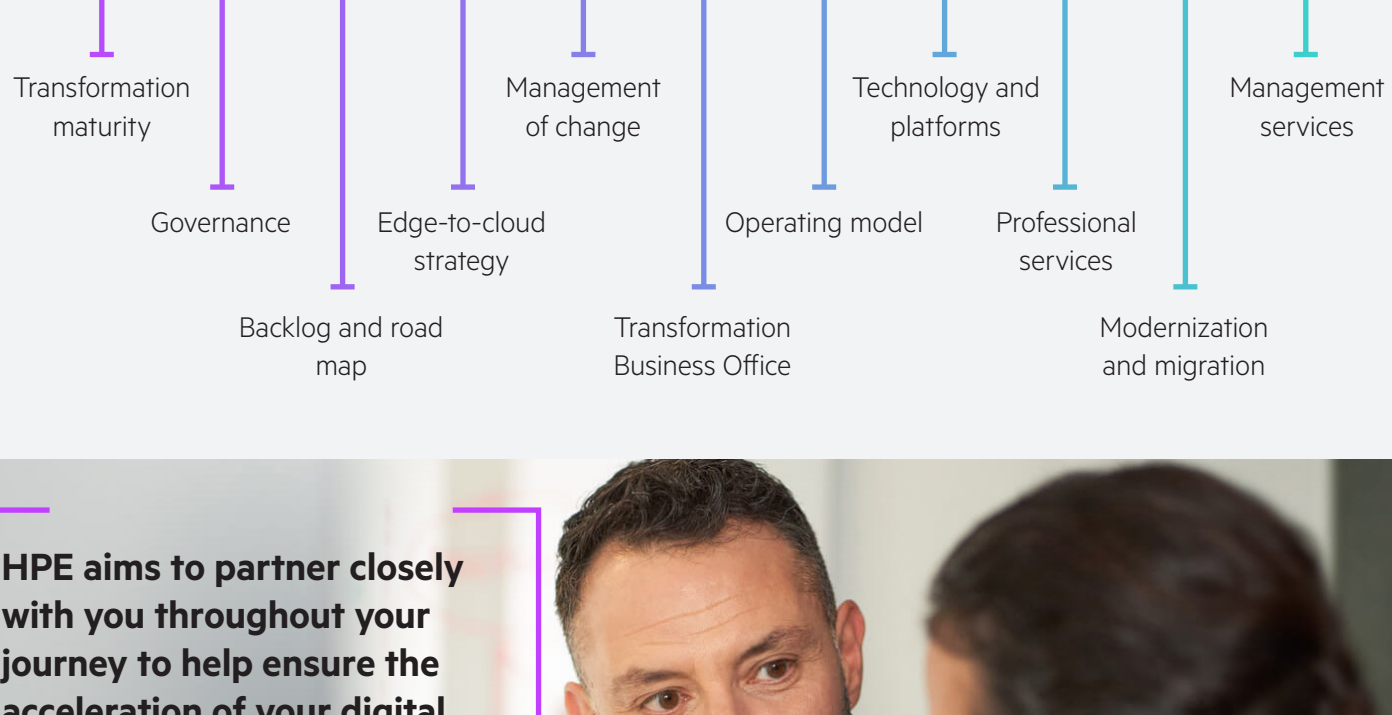

Defines a fit-to-purpose solution set to assist you as you implement and realize your transformation and digital ambitions:

HPE develops architectures and deploys technology solutions while modernizing critical applications/platforms and migrating workloads to their ultimate destination. We also facilitate management services to support ongoing operations.

HPE can help you make the right choices and implement those decisions in a way that best fits your business and objectives.

HPE aims to partner closely with you throughout your journey to help ensure the acceleration of your digital transformation in the context of your organization's specific goals, KPIs, and desired business outcomes.
