

# Unlock more value from data with a migration readiness assessment

HPE Data Migration Readiness Assessment Service

## 5 hurdles of data migration

## Evaluate and determine your readiness to de-risk your migration plan

Get migration-confident with assessment services that help you:

**Understand your IT footprint:** Gain knowledge of your existing environment to identify and understand potential challenges

**Prepare for migration:** Understand the possibilities for transforming and transitioning your legacy storage environment

**Identify appropriate next steps:** Onboard the right tools, methodology, and technologies

## Learn the ropes with the proven HPE Data Migration Readiness Assessment Service

Gain insight into the prerequisites to complete data migration on time and within budget; this service helps you:

Understand what's in the storage and SAN Configuration and scope for migration, and complexities and activities to remediate current assets in preparation for migration

Define a more effective architecture/method that supports your key business needs

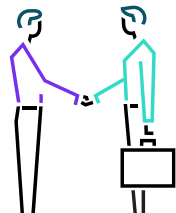

Leverage tools, methodology, and experience curated through multiple successful data migration engagements

## Our three-phased approach to validate your data migration readiness

**1**

### Project coordination and discovery phase

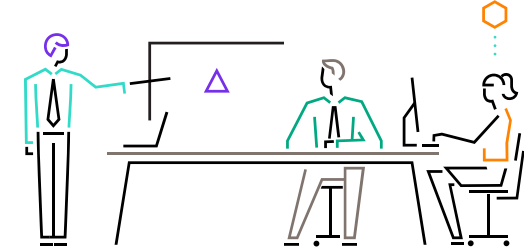

- Assigned project manager initiates kick off meeting, organizes follow ups and status meetings, discusses expectations, and identifies and reviews service prerequisites and pending actions
- Assessment documentation
- Verification of the environment and source array
- Setting up and use of a discovery tool
- Data collection through interviews using HPE proprietary service tools

- Define design and planning
- Analyze in-scope servers and storage source environments
- Identify and select appropriate migration methodology
- Find potential opportunities

**2**

### Design and planning phase

- Review Remediation Lite Assessment Report<sup>1</sup>—a snapshot of the HPE findings and recommendations
- Discuss next steps

**3**

### Assessment report review phase

<sup>1</sup> This report is based on the data provided by the customer and is a snapshot of the current state of the customer's environment that's likely to undergo migration. It may include recommendations for identified requirements that can create issues during the migration process.

## Ready to make the move with HPE?

Here are the prerequisites.

Installation of recommended host patching or software upgrades including device drivers and firmware

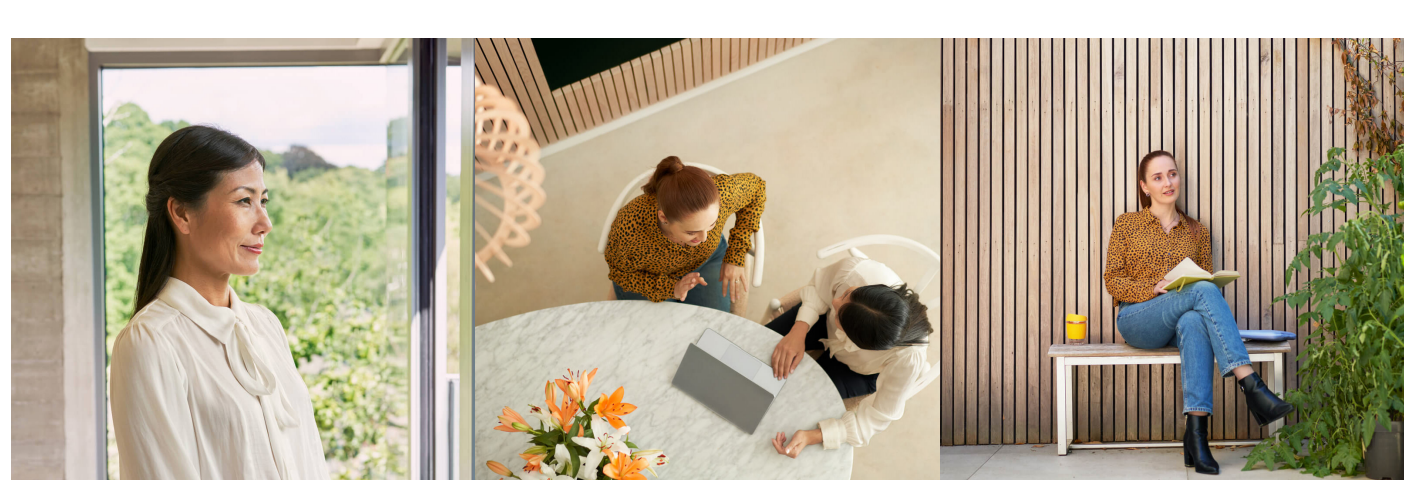

Existing storage system must run a firmware version supported by HPE Data Migration Services

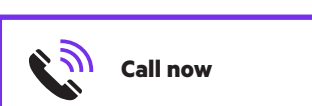

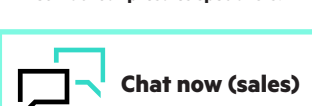

Availability of a suitable infrastructure system that enables physical connectivity as required

## Placing your order is easy

Catapult your business to new heights by adopting a data-first approach. Prepare for the transition and understand your migration readiness with HPE Data Migration Readiness Assessment Service.
