HPE GreenLake

HPE edge-to-cloud adoption framework
Innovation domain

Strategy and governance	**Innovation**	
People	Operations	
Data	Applications	
DevOps	Security	

The innovation domain focuses on building a culture of innovation, engaging entrepreneurs, developing an internal innovation pipeline, and enabling technology services to deliver new applications.

There is significant cultural and process change involved in successful digital transformation, yet that alone will not suddenly make firms innovative.

There must be an ideation-to-solution pipeline developed which cultivates the best ideas from employees, customers, and ecosystem partners.

Visit **HPE GreenLake**

Culture of continuous improvement
- IT perception and brand image
- Environment of trust, and encouragement of radical innovation
- Feedback loops
